- Shipment of sample collection supplies on-demand
- Prompt sample receipt notification to both client and clinics
- Unique sample identification using durable barcode labels

#### Quality Results

- Sample tracking documented throughout the project
- Sample reconciliation information
- Project status reports
- Summaries of sample reconciliation
- Final project summary

#### Commitment

The Sample Management and Storage Services team supports single- or multi-site studies with hundreds to thousands of samples worldwide. We have experience with pharmacokinetic, pharmacodynamic, and pharmacogenomic studies. Advion's expertise with sample receipt, reconciliation, tracking, and storage will ensure proper sample identification and integrity for the duration of your study.

**Advion is a premier bioanalytical services laboratory. Collaborate with Advion and expect quality, flexibility, timeliness, and a commitment to scientific excellence.**

## Why Choose Advion?

Your samples are important to us. Every step of the sample-management process is designed to ensure sample integrity, clear communication, and rapid results.

### How do you customize your kits?

Our Sample Management Services team reviews the project protocol and then discusses the details and options with the client. Whether complete sample kits or bulk supplies are required, the site manual and supplies are designed with an emphasis on efficiency and clarity. Once the client approves the site manual, electronic copies are sent to the sites and material assembly begins.

### What is your process for return shipping?

Advion works with industry leading, reliable shipping companies. Samples can be shipped from the clinic to Advion or directly to another analytical lab. If the samples are sent to Advion, we document and resolve all sample discrepancies. The samples are then analyzed by Advion's LC/MS/MS bioanalytical group or sent to the laboratory of your choice.

### How do you handle sample reconciliation?

When samples are received at Advion, the entire shipment is checked against the manifest and the sample information is entered into Advion's laboratory information management system, Watson-LIMS®. Any discrepancies between the sample label information and the sample collection records are directly resolved with the clinic. The client is informed throughout the reconciliation process.
